

FIG. 1 is a schematic diagram of a prior art device. The device includes a main body 10, a handle 12, a trigger 14, a spring 16, and a locking mechanism 18. The locking mechanism 18 is shown in a locked position, preventing the handle 12 from moving. The trigger 14 is used to release the handle 12 from the locked position. The spring 16 is used to return the handle 12 to its original position after use. The main body 10 is the central part of the device, and the handle 12 is the part that is moved by the user.
